

Using a Closure

```
if __name__ == "__main__":  
    def is_stock_quotes(lines):  
        return check_article(lines,  
                               config.THRESHOLD,  
                               config.STOCK_SYMBOLS)  
    print(list(find_bad_articles("my_bucket", is_stock_quotes)))
```

**“Dependency Injection is
just passing things in.”**
