client?

```python
def find_bad_articles(bucket_name, predicate, client):
    for page in get_pages(client, bucket_name, config.PREFIX):
        for key in keys_from(page):
            lines = get_file(client, bucket_name, key)
            if predicate(lines):
                yield key
```

get_pages, get_file...?

```python
def find_bad_articles(bucket_name, predicate):
    client = boto3.client('s3', region_name=config.REGION_NAME)
    for page in get_pages(client, bucket_name, config.PREFIX):
        for key in keys_from(page):
            lines = get_file(client, bucket_name, key)
            if predicate(lines):
                yield key
```
