Delegate Responsibility to Archive

```python
class S3Archive(object):
    def __init__(self, bucket_name, prefix, region_name):
        """Ctor"""
        self.client = boto3.client('s3', region_name=region_name)
        self.bucket_name = bucket_name
        self.prefix = prefix

    def get_keys(self):
        """Get an iterable of keys"""
        for page in self.get_pages():
            for key in self.keys_from(page):
                yield key

+---- 7 lines: def get_file(self, key): ---------------------------
+---- 4 lines: def get_pages(self): ------------------------------
+---- 6 lines: def keys_from(self, page): ------------------------
```

```python
def find_bad_articles(archive, predicate):
    for key in archive.get_keys():
        lines = archive.get_file(key)
        if predicate(lines):
            yield key
```
